PRODUCT of long years of careful cultivation and selection, the Rockhome collection of Alpine plants, and plants suitable for rock gardens, at last has been made available to the gardening public. Constant demands upon our stocks (which comprise over one thousand varieties and form one of the largest collections on the Continent) have forced us to place our plants within reach of plant lovers generally. Our decision appears to be in line with the rapid growth of rock gardening all over Canada and the United States—a growth which is bound to continue as gardeners realize more the fascinating possibilities of the rockery, small or large. Rock gardens appeal to the owner of the largest estate and the dweller in the smallest cottage, for wonderful collections of rock plants can be grown in the most limited space. A bank or wall, a patch of rocky ground or even a flat space, with the judicious use of a few stones, can be converted into the choicest beauty spot of any garden. Although rock plants are the natives of mountains, of deep snow and short summers, the varieties we offer in the following list are as easily grown as the most familiar garden plants. In fact, we have included in this list only varieties which need no unusual care nor any special knowledge and all are moderately priced. With the constant increase in our collection we have hundreds of other varieties, the prices of which, with directions for their care, will be gladly supplied on request. For beginners in rock gardening we strongly recommend our collections of six plants for \$1.00.
